

SCHOOL OF COMPUTER SCIENCE AND ARTIFICIAL INTELLIGENCE		DEPARTMENT OF COMPUTER SCIENCE ENGINEERING	
Program Name: B. Tech		Assignment Type: Lab	Academic Year:2025-2026
Course Coordinator Name		Dr. Rishabh Mittal	
Instructor(s) Name		Mr. S Naresh Kumar	
		Ms. B. Swathi	
		Dr. Sasanko Shekhar Gantayat	
		Mr. Md Sallauddin	
		Dr. Mathivanan	
		Mr. Y Srikanth	
		Ms. N Shilpa	
		Dr. Rishabh Mittal (Coordinator)	
		Dr. R. Prashant Kumar	
		Mr. Ankushavali MD	
		Mr. B Viswanath	
		Ms. Sujitha Reddy	
		Ms. A. Anitha	
		Ms. M.Madhuri	
		Ms. Katherashala Swetha	
		Ms. Velpula sumalatha	
		Mr. Bingi Raju	
Course Code	23CS002PC304	Course Title	AI Assisted Coding
Year/Sem	III/I	Regulation	R23
Date and Day of Assignment	Week 2 - Wednesday	Time(s)	23CSBTB01 To 23CSBTB52
Duration	2 Hours	Applicable to Batches	All batches
Assignment Number: 3.3(Present assignment number)/24(Total number of assignments)			
Q.No.	Question	Expected Time to complete	
1	<p><b>Lab 3: Application for TGNPDCL – Electricity Bill Generation Using Python &amp; AI Tools</b></p> <p><b>Lab Objectives</b></p> <ul style="list-style-type: none"> <li>To design a real-world electricity billing application using Python</li> <li>To use AI-assisted coding tools for logic generation and optimization</li> <li>To understand conditional logic and arithmetic operations</li> <li>To generate structured billing output similar to utility bills</li> </ul> <p><b>Lab Outcomes (LOs)</b> After completing this lab, students will be able to:</p>	Week2 - Wednesday	

	<ul style="list-style-type: none"> <li>• Read and validate user input in Python</li> <li>• Apply conditional logic for tariff-based billing</li> <li>• Use AI tools to assist in program development</li> <li>• Calculate and display electricity bill components</li> <li>• Build a complete real-time application</li> </ul> <hr/> <p><b>Task 1: AI-Generated Logic for Reading Consumer Details</b></p> <p><b>Scenario</b> An electricity billing system must collect accurate consumer data.</p> <p><b>Task Description</b> Use an AI tool (GitHub Copilot / Gemini) to generate a Python program that:</p> <ul style="list-style-type: none"> <li>• Reads: <ul style="list-style-type: none"> <li>○ Previous Units (PU)</li> <li>○ Current Units (CU)</li> <li>○ Type of Customer</li> </ul> </li> <li>• Calculates units consumed</li> <li>• Implements logic directly in the main program (no functions)</li> </ul> <p><b>Expected Output</b></p> <ul style="list-style-type: none"> <li>• Correct input reading</li> <li>• Units consumed calculation</li> <li>• Screenshot showing AI-generated code</li> <li>• Sample input and output</li> </ul> <hr/> <p><b>Task 2: Energy Charges Calculation Based on Units Consumed</b></p> <p><b>Scenario</b> Energy charges depend on the number of units consumed and customer type.</p> <p><b>Task Description</b> Review the AI-generated code from Task 1 and extend it to:</p> <ul style="list-style-type: none"> <li>• Calculate <b>Energy Charges (EC)</b></li> <li>• Use conditional statements based on: <ul style="list-style-type: none"> <li>○ Domestic</li> <li>○ Commercial</li> <li>○ Industrial consumers</li> </ul> </li> <li>• Improve readability using AI prompts such as: <ul style="list-style-type: none"> <li>○ <i>"Simplify energy charge calculation logic"</i></li> <li>○ <i>"Optimize conditional statements"</i></li> </ul> </li> </ul> <p><b>Expected Output</b></p> <ul style="list-style-type: none"> <li>• Correct EC calculation</li> <li>• Clear conditional logic</li> <li>• Original and improved versions (optional)</li> <li>• Sample execution results</li> </ul> <hr/> <p><b>Task 3: Modular Design Using AI Assistance (Using Functions)</b></p> <p><b>Scenario</b> Billing logic must be reusable for multiple consumers.</p> <p><b>Task Description</b> Use AI assistance to generate a Python program that:</p> <ul style="list-style-type: none"> <li>• Uses user-defined functions to: <ul style="list-style-type: none"> <li>○ Calculate Energy Charges</li> <li>○ Calculate Fixed Charges</li> </ul> </li> <li>• Returns calculated values</li> <li>• Includes meaningful comments</li> </ul> <p><b>Expected Output</b></p> <ul style="list-style-type: none"> <li>• Function-based Python program</li> <li>• Correct EC and FC values</li> <li>• Screenshots of AI-assisted function generation</li> <li>• Test cases with outputs</li> </ul> <hr/>	
--	--	--

	<p><b>Task 4: Calculation of Additional Charges</b></p> <p><b>Scenario</b> Electricity bills include multiple additional charges.</p> <p><b>Task Description</b> Extend the program to calculate:</p> <ul style="list-style-type: none"> <li>• <b>FC</b> – Fixed Charges</li> <li>• <b>CC</b> – Customer Charges</li> <li>• <b>ED</b> – Electricity Duty (percentage of EC)</li> </ul> <p>Use AI prompts like:</p> <ul style="list-style-type: none"> <li>• <i>"Add electricity duty calculation"</i></li> <li>• <i>"Improve billing accuracy"</i></li> </ul> <p><b>Expected Output</b></p> <ul style="list-style-type: none"> <li>• Individual charge values printed</li> <li>• Correct duty calculation</li> <li>• Well-structured output</li> <li>• Verified intermediate results</li> </ul> <hr/> <p><b>Task 5: Final Bill Generation and Output Analysis</b></p> <p><b>Scenario</b> The final electricity bill must present all values clearly.</p> <p><b>Task Description</b> Develop the final Python application to:</p> <ul style="list-style-type: none"> <li>• Calculate total bill:</li> <li>• <math>\text{Total Bill} = \text{EC} + \text{FC} + \text{CC} + \text{ED}</math></li> <li>• Display: <ul style="list-style-type: none"> <li>○ Energy Charges (EC)</li> <li>○ Fixed Charges (FC)</li> <li>○ Customer Charges (CC)</li> <li>○ Electricity Duty (ED)</li> <li>○ Total Bill Amount</li> </ul> </li> <li>• Analyze the program based on: <ul style="list-style-type: none"> <li>○ Accuracy</li> <li>○ Readability</li> <li>○ Real-world applicability</li> </ul> </li> </ul> <p><b>Expected Output</b></p> <ul style="list-style-type: none"> <li>• Complete electricity bill output</li> <li>• Neatly formatted display</li> <li>• Sample input/output</li> <li>• Short analysis paragraph</li> </ul> <p><b>Note: Report should be submitted as a word document for all tasks in a single document with prompts, comments &amp; code explanation, and output and if required, screenshots.</b></p>
